

Clothing/Equipment List for Level 3 Mountain Safety Courses

Skiers:

Boots	Normal downhill, Ski Mountaineering or Telemark.
Skis	Alpine or Ski Mountaineering skis with touring bindings e.g. Fritschi Diamir or Telemark skis. (No Adaptors) . Bring old skis for early season courses
Sticks	Normal downhill (larger baskets worth considering) or sticks that screw together to make an avalanche probe.
Skins	Either 'tip fix' or 'tip and tail fix' skins, ensure that the skins are almost as wide as the narrowest part of the ski. Skins can either be parallel sided or shaped to the ski.
Ski Crampons	Otherwise known as 'Harscheissen'. Make sure these fit your ski touring bindings.

Ski touring skis, skins and snowshoes can be hired in the UK or sometimes in the resort where the course is being run. See specific resort info.

Even though a shop hires ski mountaineering equipment, they might not be fully aware of how to adjust the touring bindings. Please ensure that you check the following have been adjusted correctly for you:

- Correct binding size for your boot
- Toe binding height
- Forward pressure
- Front and rear DIN settings

Check to see that the skins provided are sticky (they should be difficult to separate in a warm shop environment) and are the correct width/length for the ski being used.

If you are borrowing skins from a friend check that the wire bale at the tip of the skin fits over the tip of your ski.

Snowboarders:

Boots	Normal riding (soft boots are easier for going uphill)
Board	Normal but extra straps to attach to rucksack when going uphill
Sticks	Telescopic poles are best as they can be put in rucksack for descent.
Snowshoes	The snowshoes should have an integral crampon and a heel lift option. Avoid the North American type distinguished by aluminium tubing running round its length. Check they fit!

Everyone:

Avalanche Transceiver: They must operate on the 457 kHz frequency.

Rucksack: 40 litre capacity with side straps to aid carrying skis or board.

Clothes: Normal winter clothing used by a snowsports instructor; a versatile layering system is very useful.

Compass: Silva Type 4/54 in 360 degrees (or similar) these are easier to source in the UK

Altimeter: Optional, but very useful

Maps For courses being run in France; 1:25,000 'La Carte de Randonnee' of the area where the course is being run.

La Grave Map number, 3435ET (Valloire) and 3436ET (Meije, Pelvioux) TOP 25.

Chamonix Map number 3630 OT, TOP 25, named Chamonix Massif du Mont Blanc

Courchevel Map number 3534 OT, TOP 25 named Les Trois Vallees

Verbier Map numbers 1326 (Rosablanche) and 1325 (Sembrancher) 1:25,000

Zermatt Map number 2515 Landeskarte Der Schweiz Zermatt/Gornegrat

Hintertux Map Number 35/1 Alpenvereinskarte, Zillertaler Alpen West 1:25,000

Andorra 1:25,000 and 1:40,000 maps of Andorra are available in the local supermarkets.

Seriously consider getting your map laminated to protect it from the elements, visit www.aqua3.co.uk for prices.

If your map is not laminated, protect it with an Ortlieb map case, or similar.

Snow Shovel Some shovels come with a probe neatly fitted inside the shaft of the shovel, longer handled shovels are much easier to work with.

Avalanche Probe Not req'd if you have ski sticks that join together

Plastic card A credit card, snow crystal card or metal ski base scraper, to help identify different layers in the snow pack.

Basic 1st Aid Kit Make sure you can deal with blisters and headaches yourself.

Water Bottle/Flask Camel back systems are OK as long as you can stop them freezing up.

Group Equipment:

The following will be supplied by the course Trainers, and shared out amongst the group to carry:-

- Emergency shelter
- Rope
- Sling and krab
- Repair kit
- First Aid Kit

All equipment, whether owned, hired or borrowed must be collected and ready to use at 9am on the morning of your course.
